

Homework 2

Total points : 21

1. Download a real data consisting of outliers/influential observations, which is suitable to fit multiple linear regression models. Draw the regression quantile lines for various choices of quantile indexes and interpret the results that you obtain.

Points : 7

2. Download a real data, which is meaningful to fit non-parametric regression models. Draw the regression quantile curves for various choices of quantile indexes and interpret the results that you obtain.

Points : 7

3. Generate data from symmetric and asymmetric bivariate distributions and draw data depth and multivariate quantile contours. Interpret the results that you obtain.

Points : 7

Deadline: Deadline of submission is 10 PM, February 16, 2026.

Remark: You can use any package or any programming language to carry out the study.
